

Smart. Tough. Versatile.

Pro-V™ multivariable vortex meters let you measure flow, temperature and pressure with a single installed device. Accuracy, rugged construction and an on-board computer for field-configuration make them ideal for a wide range of steam, gas and liquid process applications, including

- Energy monitoring and boiler control
- Steam distribution, accounting and process control
- Natural gas measurement
- Chemical process control
- Compressed air flow measurement
- Irrigation flow monitoring

Available in inline models or insertion-type configurations for larger pipes and hot tap installations, with either local or remote electronics, Pro-V flow meters provide cost-effective volumetric or mass flow readings. Call or email us today for more information.
