## MicroScan Capability Keeps Growing

Already recognised as one of the leaders for monitoring and data logging, MicroScan adds more features...

**MicroScan** is a complete Windows based **Supervisory Control and Data Acquisition** software product, meeting the demands today's market place. Developed around a multi-tasking modular concept you can choose the exact system to meet your needs, then add new modules as your process grows.

MicroScan is known to be the best feature packed Recorder module for gathering valuable data, while the powerful Mimic module (MMIs) add extra depth where required. Continuous development places MicroScan in the leading position as a bench mark upon which other packages are measured.

MicroScan opens a whole new world of power and innovation previously unavailable to industrial users. Like a window into your plant, MicroScan is a proven reliable and stable platform over many years.

### Recorder:

The recorder module is a vital component to any SCADA system as it represents the data acquisition component. The Recorder is packed with features not found on most other packages:

>>>

- Real Time Trends
- Data Screens
- History and Search Screens
- Totalising in engineering units
- Alarms and Events
- Mathematical blocks
- ISO support
- Operator logs
- Auto and manual printouts
- Cost effective field interface hardware
- And much more

**MicroScan offers additional modules that allow greater personal freedom while being kept in touch with the what is happening :**

**MA5 – Alarms and data requests via SMS text messages :** The MicroScan MA5 module supports two way text messages using SMS text messages. This allows GSM mobile phones to receive messages from the factory MicroScan V5 monitoring systems, and also allows the mobile phone to send messages to the MicroScan V5 to acknowledge alarms, request the latest process state or variable of any parameter, and so on. The MA5 module will broadcast alarm messages to one or more phones and only phones whose number is listed in MA5, can request plant data. Additional security is in place for changes to plant from mobile phones.

**Web Adviser – Data and Alarms on the web :** The MicroScan Web Adviser sends data and any alarms to the web, allowing a wide and convenient viewing audience. Information control is made easy with convenient configuration of data to be viewed and frequency of data posted to the web.

- Real time data
- Current alarms
- Index for accessing historical data

### XU Transmitter Series

**Common Features:**

- Programmable with simple software via USB connection
- No power required for programming
- No calibration required for range changes
- Fully isolating 3750Vac
- High accuracy 0.1%
