

Stand Alone Rain Collectors

6464 & 6466

The Rain Collector is designed to meet the guidelines of the World Meteorological Organization. Rain enters the collector cone, passes through a debris-filtering screen, and collects in the tipping spoon. The spoon tips when it has collected an amount of water equal to the increment in which the collector measures (0.01" or 0.2 mm). As the spoon tips, it causes a switch closure. The rain water drains out through the screened drains in the base of the collector.

The collector is designed for years of accurate, trouble-free service. The shape is aerodynamically designed to minimize rainfall catch reduction caused by high winds. The body and base of the collector are constructed of tough, UV resistant plastic.

The 6466 rain collector comes with a mounting base that can be mounted to a pole or post. The 6464 model has a flat surface mount. 6466M and 6464M are factory-calibrated to report 0.2 mm per tip.
